Cable solutions for
Automation & Drives

The Quality Connection

LEONI

Issue 11/2016

All FieldLink® products are permanently enhanced for our customers. Therefore this brochure is subject to change and error. Up to all information on products, developments, research projects and trade fairs of the Business Unit Industrial Solutions can also be found on the website: www.leoni-industrial-solutions.com

Indication:

Unless prior agreement, the general conditions of sale and delivery applying will be those of the concerned LEONI AG.

In state-of-the-art automation, the trend is towards ever more complex bus systems that have to cover all the data transfer from the supervisory to the actuator/sensor level on the machine via increasingly sophisticated cables.

At the same time, these new systems must match or exceed the assurance and reliability of existing industrial cabling.

The LEONI Group

LEONI is a leading supplier of cable systems and related services for the automotive industry and many other industrial sectors.

Our group of companies employs over 76,000 people in 32 countries. Entrepreneurial insight, first-class quality and the power to innovate have secured us our position as one of Europe's leading cable manufacturers. LEONI not only develops and manufactures a portfolio of technically sophisticated products that extends from wire and optical fiber to cables, cable systems and services, but also offers its customers a range of bespoke services.

Our full range of products and services also includes strands, standardised cables, hybrid/optical fiber and special cables, cable harnesses and wiring system components, as well as turnkey, assembled systems for applications in various industrial markets.

Your markets – our strength

The breadth of LEONI's spectrum of products and services is matched by the markets and segments we supply. We focus our activities on customers in the sectors Automotive & Commercial Vehicles, Industrial Solutions, Electrical Appliances and Conductors & Copper Solutions.

In the Industrial Solutions market, we are one of Europe's leading providers. Acting as both a cable manufacturer and a dedicated solution provider, we work in fields as diverse as telecommunications systems, fiber optic cable, data communications, manufacturing projects, solar and wind power, energy and infrastructure, building services, bespoke product and robotics solutions, healthcare, traffic systems and automation technologies. Customers worldwide benefit from our innovative, high-quality products that are both reliable and long-lasting. LEONI – we create the best connection for your future.

Products and services portfolio at a glance

LEONI's core markets

Business Unit Industrial Solutions

Engineering, Products, Services: benefit from maximum reliability and economy

The Industrial Solutions business unit is among the world's leading suppliers in the field of industrial applications. From engineering to standardised and customised cables, cable assembly and integrated system solutions through to logistics concepts, technical services and sophisticated training methods – our comprehensive portfolio always offers you consistent added value across the entire lifecycle of your products. Our flexibility is what makes us stand out. We will produce or assemble single units or complete series for you, just in time.

Customers around the world trust in us – because we are there for them

We offer you our whole product range via a global sales and service network with production facilities worldwide – at any time, rapidly and reliably. With our know-how we cover the whole gamut of industrial sectors, be it factory automation, drive technology, measurement and sensor technology, robotics or special LEONI Industrial Solutions markets such as audio and video, high temperature, defence and clean-room technology. We have the right solution for you – guaranteed and technologically leading. Our products will simplify your industrial processes – everything from a single source, perfectly coordinated.

Engineering, Products, Services – LEONI is your professional system supplier.

Business Activity Automation & Drives

The Business Activity Automation & Drives is a European leader in the field of fieldbus cables as well as cables and cable systems for motion controlled (MC) drive mechanisms in machine tools. Our on-going cooperation with technology leaders and user organisations allows us to offer integral competence to our customers.

The FieldLink product range provides cable solutions for every type of conventional bus systems. In addition to standard types we also develop and manufacture special cables for industrial communication.

- Hybrid cables to minimise installation time and costs providing data and energy in a single cable
- High flexible cables for trailing applications, available with a TPU jacket for great oil resistance
- Cables with rodent protection by additional steel armouring
- Highly flexible cables with great cold bending performance of up to – 40 °C
- High temperature resistant cables thanks to a jacket of foamed or cross-linked FEP.

The product range is completed by the FieldLink MC products which comprise cables and cable systems for the connection of drives.

Fields of application

● Supervisory level

- IT communication – WAN
- Task: visualisation, archival, e.g. control post, interference indicating station

● Production and process control level

- Data communication – LAN
- Task: system control, e.g. reception, administration

● Actuator / sensor level

- Field communication (process signals)
- Task (operation level):
processing, e.g. regulation/control of realtime functions
- Task (drive control):
input and output, e.g. measure, regulate, move, switch

● Motion control

- Field communication and power supply
- Task:
drive control with input and output
and additional power supply

FieldLink® bus cables and Industrial Ethernet cables

● ● ● The FieldLink-product family provides you with the optimum solution for all common bus systems: be they AS-Interface, FOUNDATION Fieldbus, PROFIBUS or PROFINET / Industrial Ethernet applications. We are there for you at all levels of automation.

As a member of various associations and user organisations we are always at the hub of activities in this field and thus actively contribute to the further development of automation technology.

Industrial Ethernet / PROFINET

Cable characteristics:

- Flame retardant
- Weld splatter resistant
- Sunlight resistant
- Oil resistant
- Cold resistant
- Chemical resistant
- Highly flexible
- Permanent installation
- Trailing cable
- Halogen free
- Silicon free
- Compliant acc. to 2011/65/EC (RoHS 2)

Using our **product finder** you can find appropriate solutions for your application.

LEONI Special Cables with its Business Unit Industrial Solutions is a member of PROFIBUS International.

PROFIBUS

Cable characteristics:

- Flame retardant
- Weld splatter resistant
- Sunlight resistant
- Oil resistant
- Cold resistant
- Chemical resistant
- Insulation integrity (90 min)
- Highly flexible
- Permanent installation
- Direct burial
- Festoon cable
- Torsional stress cable
- Trailing cable
- Halogen free
- Silicon free
- EMC cable for electro-magnetic compatibility
- Compliant acc. to 2011/65/EC (RoHS 2)

Using our **product finder** you can find appropriate solutions for your application.

LEONI Special Cables with its Business Unit Industrial Solutions is a member of PROFIBUS International.

FieldLink MC[®] for Motion Control

● In drive technology, the trend is towards ever more complex cable systems and fully cabled modules. The quantity of data and speed of transmission are simultaneously rising rapidly. Interference-proof, fixed and dragline-compatible feedback and power cables are required. In addition, harsh industrial environments require extremely robust, permanently flexible cables that are long-lasting and reliable under high mechanical loads.

LEONI provides cables and cable systems for motion-controlled drive mechanisms in machine tools (MC = motion control) under the brand name FieldLink MC. LEONI is able to meet the market's requirements through a smaller outer diameter, application-oriented cable assemblies and the use of special materials.

Feedback cables for Motion Control

Feedback cables for Motion Control enable the information supply of any drive in a factory. The Business Unit Industrial Solutions provides all current feedback cable types for up to date motion control standards and standardisation according to UL, CSA and DESINA.

FieldLink MC feedback cables provide the connected drive with the necessary data and programming of its potential. They also provide the information for positioning and control of the drive's actuation.

Assembly Information:

The FieldLink MC product range provides cable system solutions optimised for drive technology with a large number of precisely harmonised components, reduced process costs as well as easy, safe and rapid installation. FieldLink MC cable systems consist of assembled, disruption-resistant LEONI feedback, power and hybrid cords for fixed installation or use in drag chains.

Using our **product finder** you can find appropriate solutions for your application.

FieldLink® MC analog feedback cable

for permanent installation and flexible applications with low mechanical stress

DESINA

RoHS 2

- Very good EMC performance
- Flame retardant and self-extinguishing acc. to IEC 60332-1-2
- Oil resistant acc. to DIN VDE 0281 Part 1 (TM5) (HD 21.1)
- Also available as cable assembly

All feedback cables are available for marine and offshore applications, e.g. with a special SHF1, SHF2, mud resistant or special armoured outer jacket.

See the following example:

Application:

Feedback cable for flexible installation in offshore applications with higher oil resistance acc. to NEK606 (FRNC)

Type designation:

LI9Y2Y 3x2x0.14 (D)
LI9Y 1x4x0.14
LI9Y 1x4x0.22
LI9Y CH 1x2x0.5 VZN GN

Order No.

L45551-W169-K6

All technical details can be found in our product data base:

Cable construction

Conductor	Stranded bare and tinned copper wire, insulation of modified PP, wire identification by colour
Core	Partly twisted to pairs, spinning of tinned copper wires (covering $\geq 90\%$), tinned copper drain wire, foils overlapped, insulation of PE; pairs and wires twisted in layer with fillers in gaps and central filler, fleece foil overlapped
Shield	Shield braiding of tinned copper wires (covering $\geq 85\%$)
Jacket	PVC green acc. to RAL 6018

Technical data

Nominal voltage	30 V
Test voltage	500 V
Minimum bending radius allowed	5 x outer diameter (single), 12 x outer diameter (repeated)
Maximum acceleration	2 m/s ² (6.56 ft/s ²)
Process velocity	180 m/min (590.55 ft/min)
Bendings	2,000,000 at ≥ 12 x outer diameter
Torsion	$\leq \pm 30^\circ/\text{m}$ ($\leq \pm 3.82^\circ/\text{ft}$)
Temperature range	- 20 °C to + 80 °C (- 4 °F to + 176 °F) fixed installation, + 0 °C to + 60 °C (+ 32 °F to + 140 °F) repeated + 150 °C (+ 302 °F) short-time (≤ 1 s)

FieldLink® MC analog feedback cable

for flexible installation with high mechanical stress

- High endurance
- Trailing applicable
- Very good EMC performance
- Flame retardant and self-extinguishing acc. to IEC 60332-1-2
- Halogen free acc. to IEC 60754
- Oil resistant acc. to DIN VDE 0282 Part 10
- Also available as cable assembly

Cable construction

Conductor	Stranded bare and tinned copper wire, insulation of modified PP, wire identification by colour
Core	Partly twisted to pairs, spinning of tinned copper wires (covering ≥ 90 %), tinned copper drain wire, foils overlapped, insulation of PE; pairs and wires twisted in layer with fillers in gaps and central filler, fleece foil overlapped
Shield	Shield braiding of tinned copper wires (covering ≥ 85 %)
Jacket	TPU green acc. to RAL 6018

Technical data

Nominal voltage	30 V
Test voltage	500 V
Minimum bending radius allowed	4 x outer diameter (single), 7.5 x outer diameter (repeated)
Maximum acceleration	20 m/s ² (65.62 ft/s ²)
Process velocity	300 m/min (984.25 ft/min)
Bendings	10,000,000 at ≥ 7.5 x outer diameter
Torsion	≤± 30°/m (≤± 3.28°/ft)
Temperature range	- 50 °C to + 80 °C (- 58 °F to + 176 °F) storage, - 20 °C to + 60 °C (- 4 °F to + 140 °F) repeated, + 150 °C (+ 302 °F) short-time (≤ 1 s)

Power cables for Motion Control

FieldLink MC power cables are highly flexible and designed for either the single power supply of drives or the additional signal transmission via one or two twisted pair elements for brakes or thermal sensors.

They are standardised according to UL, CSA and DESINA and are highly EMC compatible as well as insusceptible to electrical interferences.

The cables are available for flexible and trailing applications optional with brakes and thermistor.

Using our **product finder** you can find appropriate solutions for your application.

FieldLink® MC power cable

for permanent installation and flexible applications
with low mechanical stress

DESINA

RoHS 2

- Very good EMC performance
- Flame retardant and self-extinguishing acc. to IEC 60332-1-2
- Oil resistant acc. to DIN VDE 0281 Part 1 / HD 21.1
- Also available as cable assembly

FieldLink® MC power cable

for flexible installation with high mechanical stress

DESINA

RoHS 2

- High endurance
- Trailing applicable
- Very good EMC performance
- Flame retardant and self-extinguishing acc. to IEC 60332-1-2
- Oil resistant acc. to DIN VDE 0282 Part 10 / HD 22.10
- Halogen free acc. to IEC 60754
- Also available as cable assembly

Cable construction

Conductor	Stranded bare copper wire acc. to IEC 60228, wire identification V/L2, U/L1/C/L+, W/L3/D/L-, GNYE
Core	Four wires twisted in layers with fillers in gaps
Shield	Shield braiding of tinned copper wires (covering $\geq 85\%$)
Jacket	PVC orange acc. to RAL 2003

Technical data

Nominal voltage	0.6 / 1 kV (DIN VDE), 1000 V (UL / CSA)
Test voltage	4 kV 50Hz AC
Minimum bending radius allowed	5 x outer diameter (single), 20 x outer diameter (repeated)
Maximum acceleration	2 m/s ² (6.56 ft/s ²)
Process velocity	30 m/min (98.43 ft/min)
Bendings	100,000 at ≥ 20 x outer diameter
Torsion	$\leq \pm 30^\circ/\text{m}$ ($\leq \pm 3.28^\circ/\text{ft}$)
Horizontal length	max. 5 m (max. 16.40 ft)
Temperature range	-20 °C to +80 °C (-4 °F to +176 °F) fixed installation, +0 °C to +60 °C (+32 °F to +140 °F) repeated, +150 °C (+302 °F) short-time (≤ 1 s)

Dimensions*	Outer diameter	Order number
(4x1.50 mm ²)	8.0 mm (0.31 in)	LEC 003344
(4x2.50 mm ²)	9.6 mm (0.38 in)	LEC 003346
(4x4.00 mm ²)	11.0 mm (0.43 in)	LEC 003348

Cable construction

Conductor	Stranded bare copper wire acc. to IEC 60228, wire identification power: V/L2, U/L1/C/L+, W/C3/D/L-, GNYE, signal: black, white
Core	Signal wires: twisted to pairs, braiding of tinned copper wires (covering ≥ 85 %); pair and four wires twisted in layer with fillers in gaps and central filler
Shield	Shield braiding of tinned copper wires (covering ≥ 85 %)
Jacket	PVC orange acc. to RAL 2003

All power cables are available for marine and offshore applications, e.g. with a special SHF1, SHF2, mud resistant or special armoured outer jacket.

See the following example:

Application:

Power cable for flexible installation in offshore applications with higher oil res. acc. to NEK606 (FRNC)

Type designation:

LI9Y 1x2x1.5 (C)
LI9Y-J CH 1x4x1.5 OG

Order No.

L45551-F59-K6

FieldLink® MC power cable

for flexible installation with high mechanical stress

Cable construction

Conductor	Stranded bare copper wire acc. to IEC 60228 Cl. 5 and Cl. 6, wire identification power: black, white with numbers 1, 2, 3, GNYE, signal: 1st pair 5, 6, 2nd pair 7, 8
Core	Signal wires: twisted to pairs, both sides aluminised tape wrapped, braidings of tinned copper wires (covering $\geq 85\%$); pairs and four wires twisted in layer with fillers in gaps and central filler
Shield	Shield braiding of tinned copper wires (covering $\geq 85\%$)
Jacket	TPU orange acc. to RAL 2003

Technical data

Nominal voltage	0.6 / 1 kV for power and 24 V for signal (DIN VDE), 1,000 V for power and signal (UL / CSA)
Test voltage	4 kV 50 Hz AC (wires)
Minimum bending radius allowed	6 x outer diameter (single), 12 x outer diameter (repeated)
Maximum acceleration	5 m/s ² (16.40 ft/s ²)
Process velocity	180 m/min (590.55 ft/min)
Bendings	10,000,000 at ≥ 12 x outer diameter
Torsion	$\leq \pm 30$ °/m ($\leq \pm 3.28$ °/ft)
Temperature range	- 50 °C to + 80 °C (- 58 °F to + 176 °F) fixed installation, - 20 °C to + 60 °C (- 4 °F to + 140 °F) repeated, + 150 °C (+ 302 °F) short-time (≤ 5 s)

- High endurance
- Trailing applicable
- Very good EMC performance
- Flame retardant and self-extinguishing acc. to IEC 60332-1-2
- Oil resistant acc. to DIN VDE 0282 Part 10 / HD 22.10
- Halogen free acc. to IEC 60754
- Also available as cable assembly

Dimensions*	Outer diameter	Order number

Hybrid cables for Motion Control

FieldLink MC hybrid cables reach new heights in cost efficiency and flexibility. The innovative design combines energy supply and data transfer in one single cable, thereby reducing wiring expenditures by up to 85 %.

The cables withstand 5 up to 10 million bending cycles and significantly increases modularity in machines and systems.

Using our **product finder** you can find appropriate solutions for your application.

Type designations for copper cables

B	armour
(2B...)	two layers of steel tape; thickness of one steel tape in mm
C	screen of copper wire braiding
FE 90	insulation integrity 90 minutes
FLI	flat cable with stranded conductor
FR	improved flame retardant
H	insulation or sheath of halogen-free material
J-	installation cable
-J	grounded wire, green-yellow
... IMF	separate stranding element in metal foil or in metallised paper and sheath wire (e.g. pairs PIMF)
KF ...	cold-proof implementation down to minus ... °C
L	wires with bunched conductor > 0.2 mm ²
LI	cord with stranded conductor < 0.2 mm ²
NC	non corrosivity of combustion gases
OE	oil-proof
(ST)	electrostatic shield made of metal foil or plastic laminated metal foil
VZN	tinned conductor
W	corrugated steel sheath
X	insulation, sheath or protective cover of cross-linked Polyvinylchloride (PVC)
2X	insulation, sheath or protective cover of cross-linked Polyethylene (PE)
11X	insulation, sheath or protective cover of cross-linked Thermoplastic Polyurethane (TPU)
Y	insulation, sheath or protective cover of Polyvinylchloride (PVC)
2Y	insulation, sheath or protective cover of Polyethylene (PE)
9Y	insulation, sheath or protective cover of Polypropylene (PP)
11Y	insulation, sheath or protective cover of Thermoplastic Polyurethane (TPU)
12Y	insulation of Polyethylene Terephthalate
99Y	insulation, sheath or protective cover of all other thermoplastics without VDE symbols
02YS	insulation of cellular Polyethylene (PE) with additional skin of solid material (foam skin)
02Y	insulation of cellular Polyethylene (PE)
-Z	wires with printed numbers

Colour code DIN IEC 60757:

Installation guidelines

Installation guidelines for flexible cables in energy tracking chains

Please abide by the following recommendations for LEONI cables used in energy tracking chains.

- 1.** In order to conserve the high-quality characteristics, storage should be in closed spaces under observance of the temperature thresholds correspondingly stated.
- 2.** To ensure easy installation under optimal mechanical conditions, cables should be stored at room temperature for at least 24 hours before use.
- 3.** Cables should be stored in cable drums until final installation. Repeated winding of the cables onto different reels should be avoided whenever possible.
- 4.** The choice of energy tracking chains must follow the characteristics of the cables in use.
- 5.** The bending radii of the cables must not fall short of the specified values.
- 6.** Installation of the cables in energy tracking chains must be torsion-free. Cables must never be pulled sideways from the drum or ring, but tangentially rolled off immediately before use. If necessary, lay or hang the cables out before use.
- 7.** Within the energy tracking chains, the cables have to be loosely laid out side by side without friction. Freedom of movement must be ensured. Make sure there is free space amounting to at least 10 % of the cable diameter on all sides, without exceeding 50 % in width. For optimal adjustment, place single cables separated by fixed links. Placing cables on top of each other (i.e. without fixed links) should be avoided whenever possible. Cables of different outer diameters and conducting materials should be installed separately.
- 8.** In order to prevent cables from restricting each other's movement, vertically suspended energy tracking chains should allow for free space of at least 20 % of the cable diameter above and below the cable.
- 9.** Cables within an energy tracking chain must retain freedom of movement in the longitudinal direction at all times. Use of fixations and/or guiderails is prohibited. No tensile force is to be effected in the radius.
- 10.** In order to ensure the freedom of movement of the cores, cables must extensively be fixed by the outer jacket at both ends of the energy tracking chains. Movement up to the points of fixation, however, is prohibited. Proximity to the nearest pivot point of the chain is 20 x cable diameter at maximum.
- 11.** After a short period of operation, it is imperative to verify proper cable adjustment (stretching during operation, contortion). Verification checks have to take place after a few completed cycles each. If necessary, return the cables to center position and readjust the cable-length at the entrainer. Make sure the cable does not fly out at the inner or outer radius. Cable adjustment must be rechecked after a few test runs and should be verified every six months.
- 12.** In the event of fracture or other damage to the energy tracking chain, all cables must be replaced. Permanent damage resulting from contortion, indentation or shearing is to be expected.

These guidelines are based on field experience with LEONI cables; they are not grounds for demands of warranty and/or recourse. Please also refer to the installation guidelines provided by the manufacturer of the energy tracking chain.

Test centre

Ensuring long-lasting dynamic requirements

We are always investing in our device equipment to satisfy the needs of our customers. The long-lasting mobility of our cables is tested in various processes in order to prove their long service life.

Drag chain tests

Our test routes have different travel ranges, accelerations and travel speeds. Each test system can test up to 40 cables over the equivalent of several years. The longest traverse path measures 50 m.

Torsion tests

In different torsion and torsional bending machines, the cables are tested for twisting and traction around themselves. They are subjected to a torsional movement of up to $\pm 360^\circ$ in length from 0.3 to 1 meter.

Bending tests

In test systems with rolls for different bending radii, a test is performed to see whether the cable withstands frequent bending cycles. The rolls used have a diameter of 20 to 250 mm.

S-shaped bending test

The cable is fed across two bobbins in an s-shaped flex movement. As an option and as required, weights can be fitted to both ends. The line generates up to 12 cycles per minute.

To pass the flex test, the cable may not present any power failure between the cores.

LEONI checks the quality of the cables in their in-house test centre. Discover the competence here.

The significance of UL and CSA certifications

	Approval only for Canada	Approval only for USA	Approval for Canada and USA
<p>The two organisations, UL and CSA International, are recognised in Canada and in the USA. They issue various test marks according to validity.</p>			
<p>The test mark (UR) identifies products which are integrated as components in electrical equipment (recognised mark).</p>			

Before electrical products are allowed onto the North American market they have to be tested and certified as to their hazard potential in respect of combustibility, electric shock and – for certain equipment – electromagnetic compatibility.

To comply with product liability laws a manufacturer has to ensure by the testing and certification of his components that they fully satisfy national statutory requirements.

Certification for the USA:

Certifications have to be issued by a Nationally Recognized Testing Laboratory (NRTL). NRTL status is awarded by the Occupational Safety and Health Administration (OSHA).

- e.g.
- UL (Underwriters Laboratories)
 - CSA International (Canadian Standards Association)
 - ITSNA (Intertek Testing Service NA, Inc.)
 - TUV Rheinland of North America

Certification for Canada:

Certifications have to be issued by a qualification office recognised by the Standards Council of Canada (SCC).

- e.g.
- CSA International
 - UL
 - ITSNA

Appliance Wiring Material (AWM)

Appliance wiring material (AWM) is a recognised component. That means that it is used in UL Listed or Classified end products. AWM wires are intended as factory-installed or factory-provided components of complete equipment. The final acceptance of the component depends on its installation and use in or with complete equipment submitted to UL.

Many different constructions of wires and cables make up the AWM category, including single- and multi-conductor types of a wide range of conductor sizes, insulation and jacket materials and uses. Each construction of wire is given a style number with a corresponding style page, used to describe the construction.

The style page includes temperature and voltage ratings, conductor size and material, insulation and jacket materials and thicknesses, shields or coverings and as well as the UL reference standard used to evaluate the wire.

The basic standard used to evaluate AWM is UL 758, the standard for Safety of Appliance Wiring Material. The Canadian standard for appliance wiring material is CSA C22.2 No. 210-11, Appliance Wiring Material Products. The UL Recognised Component Mark may be used on components certified by UL to both Canadian and U.S. requirements. LEONI has more than 700 styles in its procedure of authorised AWM styles.

Flame tests for AWM applications are described in UL 1581, UL 2556 and CSA C22.2 No. 03. Characteristic for these tests is the periodic exposure of the test specimen to flames and the disallowance of the ignition of cotton wool by dripping off glowing particles. The most severe flame test for single cables is the VW-1 test. Any style can be rated and marked VW-1 as long as it meets the requirements in the standard.

UL / CSA Single Cable Flame Tests

Name / class	Standard	Area of use
VW-1 Vertical-Specimen Flame Test	UL 2556 Sec. 9.4	Special applications and „limited use“ acc. to NEC
FT1 Vertical Flame Test	UL 2556 Sec. 9.3 CSA C22.2 No. 03	AWM Class I / Class II (internal/external wiring)
CFT Cable Flame Test	UL 1581 Sec. 1061	AWM Use II (external wiring) (formerly known as Page 95)
H Horizontal Flame Test	UL 1581 Sec. 1090	AWM Use I (internal wiring) (formerly known as Page 31)
FT2 Horizontal Flame Test	UL 2556 Sec. 9.1 CSA C22.2 No. 03	AWM Class I / Class II (internal/external wiring)

UL listed cables types

for fixed wiring in buildings, factory wired equipment and for field wiring

NEC cable substitution hierarchie

A → B Cable A shall be permitted to be used in place of cable B Listed types of LEONI

Cable types	Use	NEC article	UL standard
CMP, CMR, CMG, CM, CMX	Communications cables	800	444
CL3P, CL2P, CL3R, CL2R, CL3, CL2, CL3X, CL2X	Class 2, Class 3 Remote-Control, signaling and power limited cables	725	13
PLTC	Power limited tray cables	725	13

National Electrical Code (NEC)

The NEC is published by the National Fire Protection Association (NFPA) to provide practical protection for persons and property from the risks of using electricity (see also www.nfpa.org). Instructions on how to use cables and wires in various areas (e.g. inside and outside buildings, factories and other premises) are set out in nine chapters. NEC type IDs are abbreviations consisting of a prefix and a suffix. The prefix describes the type of cable (e.g. CM = Communications metallic, CL3=class 3 Power Limited Circuit, OF = Optical Fibre). The suffix indicates the type of mandatory flame test and the area of use (e.g. P = Plenum, R = Riser, X = Limited Use).

Plenum

Cables which are allowed to be used without additional protection in ducts and horizontal spaces above suspended ceilings plenums are called Plenum Cable or Horizontal Cable. The requirements imposed on these cables for "low smoke" and "low flame spread" are very severe. To comply with the NEC, a plenum cable has to pass the Steiner Tunnel flame test in accordance with NFPA 262 FT6. The type ID ends with a P.

Riser

Cables which are installed in risers (vertical shafts) or other cavities linking at least two storeys are called riser cables or backbone cables. Requirements imposed on fire safety are less severe than for plenum cables. A riser cable has to pass the riser flame test in accordance with UL 1666. Its type ID ends with an R.

General purpose

Cables used in areas of buildings which are neither plenums or risers are called general purpose cables. As a minimum requirement they have to pass the vertical tray flame test in accordance with UL 1685 Sec. 4 – UL-version (no ID letter issued). Cables which pass the vertical tray FT 4 test in accordance to UL 1685, Sec. 12 - CSA-version have a G at the end of their ID code.

Dwelling

These types of cable are for limited use inside dwellings. They are identified by the letter X and are required to pass at least the vertical wire flame test VW-1 according to UL 2556. UL listed cables are marked with the NEC type ID which corresponds to the respective UL standard.

UL single cable flame tests

UL 2556 Sec.9.3 FT1 / Sec.9.4 VW-1 / UL 1581 Sec.1061 Cable Flame

Test set-up:

The cable is fixed vertically and fitted with a paper indicator flag (P, 10 x 20 mm). A Tirrill burner (modified Bunsen burner), fixed at an angle of 20° to the vertical, is used to apply the flame.

Flame temperature: Determined by the specific setting of the Tirrill burner flame. The power amounts to 500 W.

Test duration:

Sec. 9.3: 5 cycles of flame applied for 15 s with a break of 15 s.

Sec. 9.4: 5 cycles of flame applied for 15 s with a break of 15 s and a maximum break of 60 s.

Sec. 1061: 3 cycles of flame applied for 60 s with a break of 30 s.

Compliance criteria:

The sample may continue to burn for a maximum of 60 s after the flame is removed and the paper indicator flag (P) can be carbonised at a maximum of 25 %. Any glowing or flaming material dripping off must not ignite the cotton wool (B) (does not apply to the FT1 test)

UL1581 Sec.1090 H / UL2556 Sec.9.1 FT2**Test set-up:**

The cable is fixed horizontally with a Tirrill burner flame applied vertically (for the FT2 test the burner is angled 20° from the vertical). The cotton wool (B) is laid out next to the burner.

Flame temperature:

Determined by the specific setting of the Tirrill burner flame.

Test duration:

30 sec

Compliance criteria:

Any glowing or flaming material dripping off must not ignite the cotton wool (B).

Sec. 1090: The flame propagation speed must not exceed 25 mm/min.

Sec. 9.1: The length of the carbonised part may not exceed 100 mm.

UL large scale flame tests

UL 1685 FT4 Test / IEEE 1202 – CSA method

Test set-up:

The cables are fixed in several layers to a ladder (quantity depends on the cable diameter). The length of each specimen is 2.44 m (8 ft). Cables with a diameter < 13 mm may be fixed to the ladder in bunches. The burner is angled 20° from the horizontal.

Flame temperature:

Determined by the specific volumes of propane and air.

The power amounts to 20.5 kW (70,000 Btu/hr).

Test duration:

20 minutes (2 test runs)

Compliance criteria:

The cable damage height shall be less than 1.50 m (4 ft 11 in) when measured from the lower edge of the burner surface.

UL 1685 Vertical Tray Test – UL method

Test set-up:

One layer of cables is fixed to a ladder (quantity depends on the cable diameter). The length of each specimen is 2.44 m (8 ft).

Flame temperature:

Determined by the specific volumes of propane and air. The power amounts to 20.5 kW (70,000 Btu/hr).

Test duration:

20 minutes (2 test runs)

Compliance criteria:

The cable damage height shall be less than 2.44 m (8 ft) when measured from the bottom of the cable tray.

IEC single and large scale flame tests

IEC 60332-1-2 / EN 60332-1-2 / VG 95218-2 Method 1 / BS 4066 Part 1

Test set-up:

The single cable to be tested is fixed vertically and exposed to a Bunsen burner flame at a 45° angle to the vertical. Test apparatus according to IEC/EN 60332-1-1

Flame temperature:

Determined by the specified setting of the Bunsen burner flame.

Test duration:

Cable with a diameter of ≤ 25 mm: 60 sec

Cable with a diameter of $25 < D \leq 50$ mm: 120 sec

Compliance criteria:

The fire damage must end at least 50 mm below the upper fixing clamp. The cable must be self-extinguishing.

IEC 60332-3/EN 50266-2

Test set-up:

The cables are fixed to a ladder, close together or at a distance depending on the type of fire. The cables may be fixed in several layers.

Flame temperature:

Determined by the specified volume of propane and air.

Test duration:

Part 21: Category A F/R only for special applications

Part 22: Category A (7 l flammable material/m): 40 min

Part 23: Category B (3.5 l flammable material/m): 40 min

Part 24: Category C (1.5 l flammable material/m): 20 min

Part 25: Category D (0.5 l flammable material/m): 20 min

Compliance criteria:

Fire damage to the cable may be visible for a maximum of 2.5 m from the bottom of the burner to the top.

Quality and environment

LEONI quality management

LEONI's process oriented quality management is certified globally to ISO 9001 standard. With standardised process diagrams and process descriptions in our management handbook as well as process instructions, we ensure that precautionary quality assurance methods are used in all phases of production and that process as well as product quality is systematically improved. With forward quality planning during product and process development, testing tool capability combined with SPC, we monitor and optimise the entire value chain from goods receiving to production and through to delivery of our products to the customer. In our quality philosophy, documented in LEONI's quality policy and the quality targets based on the policy, customer satisfaction, delivery reliability and error avoidance have thus always had top priority.

LEONI environmental management

LEONI considers thinking and acting in an environmentally aware manner to be among the factors that point the way to successful growth in the future.

Our environmental system certified to the DIN EN ISO 14001:2004 standard provides all LEONI facilities with the means to systematically save natural resources. Consistent implementation of LEONI's environmental policy and the environmental targets based on it means that, at all facilities, there is continual reduction in energy and water consumption, emissions and waste as well as that our staff and suppliers are sensitised to environmental protection concerns.

Furthermore, as early as the product and process design stage, we take into account environmentally friendly technologies to develop and manufacture products that are ecologically compatible on a lasting basis. That our product range also includes lead-free and halogen-free insulation and jacket compounds goes without saying.
